

Face Recognition, Attendance & Real-Time Person Tracking

Problem Statement:

- With increasing scale of operations at Govt. offices, there was a need to enhance operational visibility, strengthen security monitoring, and modernize attendance systems. Existing processes required greater automation, real-time insights, and centralized control for efficient facility management.

Solution:

- An AI-powered Face Recognition, Attendance, and Real-Time Tracking Solution was deployed. The system integrates 7 CCTV cameras with an on-premise GPU server to enable real-time face detection and classification (authorized, unauthorized, blacklisted, unknown).
- Key features:
 - Automated attendance with reporting
 - Real-time tracking on a digital floor map with movement history
 - Centralized monitoring dashboard with analytics
 - Alert system for security events
 - Secure access with role-based controls

Impact:

- High Accuracy: Achieved 98.2% accuracy with zero false positives
- Operational Efficiency: Automated attendance and improved workforce visibility
- Advanced Tracking: Enabled real-time tracking of employees and visitors, including authorized movement paths and route history
- Access Control & Security: Ensured zone-based access with alerts for unauthorized entry or route deviations
- Insights & Scalability: Delivered actionable analytics with a future-ready, scalable platform
